

Basic Mechanics and Optics (SCIS2003)

Introduction	<p>This programme is designed for junior secondary students who are interested in physics. It is delivered through lectures and tutorials. Students will have to attend all lectures which cover a total of 24 hours. They will also need to select a set of tutorials with a total of 6 hours. During the tutorials, students will participate in interactive learning activities in groups, e.g. experiments and group discussions, etc. This programme provides students with the fundamental knowledge of physics, such as Newton's laws, light refraction and electric circuits, in an inquisitive approach through various experiments, educational software and teaching aids for physics.</p>
