

Chatbot Your Smart City (CD00101819/T2A)

Introduction

Smart city refers to the integration of various information technologies or innovative ideas to enhance the efficiency of resource utilisation, to optimise urban management and services, and to improve the quality of the people's life. Typically, the effectiveness of a smart city application hinges on the clever use of data and in view of this, the Hong Kong government is set to open up more of its data resources to the public.

In this talk, the speaker will discuss the development of an intelligent chatbot which takes advantage of this open data and suggests the nearest collection point for waste recycling.

The speaker **Dr Martin Choy** received his B.Eng., M.Phil. and Ph.D. degrees from the Chinese University of Hong Kong, all in Information Engineering. In 2008, he joined the Department of Computer Science in the Hong Kong Baptist University and is now serving as a lecturer.

Dr Choy has been focusing on gifted education and platform-based development in recent years. He has served as the instructor of a number of coding workshops for the Hong Kong Academy of Gifted Education since 2000. His research interests include computer graphics, mobile computing, IoT and web engineering.

Programme Type

Introductory Talk in Technology ([NON Token-required](#))

Speaker

Dr Martin Choy

Target Participants

- S1 – S6 HKAGE student members
- Class size: 30
- * *First-come, first-served*

Language

Cantonese

Application Deadline

29 April 2019
