

Design Thinking for Social Innovation (LEAT1560)

Introduction

A new way of solving problems is taking over the world. Originally developed and advanced by Stanford University's pioneering "d.school", it is now being implemented in countless NGOs, government bodies, social enterprises and even multinational corporations.

In this talk, we will explore how the theory of Design Thinking is being used in the field of social innovation - how real social issues are being addressed with innovative solutions, inspired by Design Thinking concepts and tools.

One of Hong Kong's leaders in Design Thinking training, himself a social entrepreneur, will share inspiring case studies and exercises, so that you can apply some of the tools in your own life, especially if you are interested in the non-profit sector or social innovation fields.
